Companies need to re-examine their portfolio of functional food offerings. Immunity promoting products are a good example. While it is currently in high demand, it remains quite limited in category presence. The sense of cautiousness brought about by the pandemic also suggests that food and drinks need to be clearly 'sign posted' on what they deliver. Clearly highlighting ingredients that support long term health and wellbeing will help consumers navigate the best choices available for them. The sudden change of lifestyle during lockdown also means that functional benefits need to clearly link to the way we are living our lives today and in the future. Products that support

fitness at home, or maintaining a healthy weight, for example, will generate interest as consumers become more worried about reduced physical activities.
